Notes:

- Two rates in a season indicate there are step rates for energy beyond a certain level of energy consumption. ACEC will no longer have a stepped energy rate in 2010.
- If there is no rate in the summer column then the winter rate applies for the entire year.
- ACEC's rates are for the entire year; the average PCA for 2009 is shown in the summer column. This PCA was built into the 2010 base energy rate.
- All other rates and charges for other cooperatives and IOUs exclude any PCA they charged. For ACEC this PCA had an average impact of \$5 per month based on 1,000 kWhrs usage (= 1000 x \$0.005).
